

Product Requirement Document

Feature Name

Pinned Recommendations Tool

Background

Operations teams currently face difficulties manually controlling products shown inside recommendation widgets.

Pinning products manually using backend support is time consuming and lacks scalability.

Problem Statement

There is no centralized interface for:

- pinning products
- managing category level recommendations
- handling experiment specific merchandising

This creates operational dependency and slower campaign execution.

Objective

Build an internal tool that enables Ops teams to:

- pin products
 - configure recommendation widgets
 - manage experimentation logic
 - schedule merchandising campaigns
-

User Stories

Ops User

As an Ops manager,
I want to pin products under specific categories,
so that I can improve visibility for high priority SKUs.

Business User

As a business stakeholder,
I want event based recommendations,
so that seasonal campaigns perform better.

Functional Requirements

Product Level Pinning

Users should be able to:

- pin products
- remove pinned products
- set priority order

Category Level Pinning

Users should be able to:

- pin products at L3 category level
- apply rules across categories

Experiment Based Pinning

Users should be able to:

- configure experiment IDs
 - create segmentation based merchandising
-

Success Metrics

- Increase recommendation CTR
 - Increase conversion rate
 - Reduce Ops dependency on engineering
 - Reduce campaign launch time
-

Risks

- Over pinning may reduce personalization quality
 - Incorrect configuration may affect relevance
-

Future Enhancements

- AI based pinning suggestions
- Auto optimization based on CTR
- Real time analytics dashboard
